Aquatic Lift

Aquatic Wheelchair

Splash Aquatic Lift

The Splash Aquatic Lift is a semi-portable lifting system designed for swimming facilities seeking to provide user friendly access to their swimming pools. The Splash is battery powered and operated by a screw driven actuator. The design and durability of the system ensures consistent operation and minimises service problems.

The Splash is virtually maintenance free. The components are made from corrosion resistant materials, including powder-coated aluminium (arms), and powder-coated stainless steel (base, mast, and seat frame). The unique seat of the lift was specifically designed to provide the user with the greatest possible safety, comfort and ease of transfer.

The hand control is completely waterproof, and allows either the user or the attendant to control its operation with ease. The control box and battery are water resistant and should be protected from long exposure to the water. A small, waterproof cover is included with each lift to cover the control box when the system is in use. If the lift is used outdoors, an optional full cover is available for purchase and is recommended to use to protect the system.

The seating system used is the product of years research. This is the first such system that is designed specifically for disabled swimmers. The seat itself is both deeper and higher to both provide a more stable platform for sitting, as well as being able to better accommodate swimmers with reduced trunk stability. The seat has been flattened considerably to eliminate any ridge that would hamper transferring. The sections of the seat have attachment points for both the standard seat belt assembly as well as our optional stability vest.

The standard moulded plastic footrest is removable and will float upwards to prevent damage if the user lowers the chair too low over the deck.

The included armrests have been strengthened which allows them to be used for support when transferring onto the seat. They can be rotated out of the way during a transfer.

Included with each lift: Footrest, Caddie, Seat with Arm Rests, Battery with cover, Battery Charger and Seat Belt Assembly.

Splash Standard - Suits most applications

- (Max. 740 mm from pool edge no fall)

Splash Extended Reach - For pools requiring a longer reach

- (Max. 1170 mm from pool edge no fall)

Splash Hi/Lo - For pools/spa with high/wide copings.

Splash Spa - For spas up to 1.2 m above the deck

Options:

Stability Vest

Code: PLIF10200

Seat Pad

Code: PLIF10210

Total Lift Cover for Standard lift

Code: PLIF10220

Mast Lift Cover for Extended Reach lift

Code: PLIF10225

Spine Board Attachment

Code: PLIF10240

Extra Deck Anchor for multiple locations

Code: PLIF10250

(155 mm x 110 mm H x D)

Models :

Standard Lift - Suits most applications

Code: PLIF10000

Extended Reach Lift - For pools requiring a longer reach

Code: PLIF10010

Hi /Lo Lift - For pools/spa with high/wide copings

Code: PLIF10020

Spa Lift - For spas up to 1.2m above the deck

Code: PLIF10030

Aquatic Wheelchair

Aquatic Wheelchair

A unique concept in wheelchairs for use around wet areas, in the swimming pool and shower. This light yet robust wheelchair safe working load is up to 150 kgs (SWL 150 kg) (Bariatric Chair SWL 180 kg) and complies with Australian Standard AS3973. It is the product of many years of innovative research and development, culminating in the manufacture of a rust free, low maintenance and attractive wheelchair.

The chair is made of PVC tubing which doesn't get hot or have sharp edges. The strong open weave fabric allows the flow of air or water. Large push rims are fitted for independent use.

This wheelchair is ideal for use at leisure centres and hydrotherapy pools. It is particularly useful where there is a ramp or beach area built into the pool or where elderly or disabled patrons have to walk long distances.

Features:

Lift up arm rests making transferring clients easier

Stainless steel brakes on both sides

Solid rubber tyres

Large push rims fitted on wheels

Push handles at the rear are built into the design allowing assistance if necessary.

Split flip up foot rests

Weight: 15.3 kg

Standard Chair Code: PCHAIRPSD

Bariatric Chair (SWL 180 kg) code: PCHAIRPSDB

Options:

Junior Adaptor - Adjustable (4 to 12 years) Code: PCHAIRJRA

Harness Belt Code: PCHAIRBH

Lap Belt Code: PCHAIRLB

Full details and specifications available at our web site.

Hydrotherapy Plinth

Made of 316 mirror polished stainless steel. The plinth locks on to a standard 38 mm^ø or 50 mm^ø hand rail. (Pictured but not included). The fabric is water-proof quality and features strong lace on design. It is removable for easy storage when not in use. Supplied with straps.

Dimensions: 1150 mm x 588 mm (L x W)

Code: PPLINTH
