

# IQ C5 Tabs Dosing Guide

C5 TABS are a Sodium Chlorite and Inorganic Salts blend, which self-activate in contact with water to form Chlorine Dioxide (ClO<sub>2</sub>).

## DIRECTIONS FOR USE:

1. Establish the required number of C5 TABS to treat the incident. Refer to the Dosage Rate below for Shock Treatment (1ppm) or Super Chlorination (0.4ppm).
2. Isolate Probes (same method as for 20ppm chlorination).
3. To apply the C5 TABS, tear the vacuum foil and drop the C5 TAB into the pool. The TABS will begin to fizz immediately when they contact the water.
4. Wearing the appropriate PPE, (rubber gloves, safety glasses, an approved mask and protective clothing) dose the required number of C5 TABS.
5. After applying the correct number of C5 TABS, wait 70 minutes and take a Chlorine Dioxide reading using an approved method.
6. Check pH and when within range, open probes again.
7. Once Yellow Colour has left the water (usually 2-3 hours) and Chlorine Dioxide test has been carried out, swimmers can return to the pool.

Application	Water Volume (Litres)			
PPM	10,000	50,000	500,000	1,000,000
0.4	N/A	2 Tablets	20 Tablets	40 Tablets
1.0	1 Tablet	5 Tablets	50 Tablets	100 Tablets

## PLEASE NOTE:

- Pool Covers should be removed prior to and during treatment and remain off for a minimum of 12 hours.
- Ensure that pool area is well ventilated during and after treatment.

If you require any further information, please do not hesitate to contact International Quadratics Pty Ltd.
